

The Lean Six Sigma Company is pleased to be partnering with Wisconsin Center for Performance Excellence, in hosting this free webinar on the importance of productivity for your organization in today's environment.

This FREE unique webinar is 1 hour in length and introduces you to two key Lean Six Sigma principles to drive significant productivity gains in your organization:

- Waste
- Problem solving

The current situation in the USA is unprecedented with many organizations forced to reduce staff to survive because of the challenges with Covid-19.

**So how do organizations need to respond now and more importantly recover in a post COVID-19 world once the economy starts growing again?**

The answer is productivity! You need to figure out how to do more with less. Learning how to recognize waste is the key to success. This webinar will introduce you to various type of waste and show that waste is more prevalent in your processes than many of us realize.

Recognizing waste is only the first step—next, you focus on eliminating it. This webinar will also introduce you also to the various problem-solving techniques, so you can start driving productivity gains for your organization. This webinar will be hosted by Edwin Boon, GE certified Master Black Belt and CEO of The Lean Six Sigma Company USA.
